

CLIMATIC SUITABILITY TREND WITH CENTROID SHIFT. The map shows the per-cell Theil-Sen trend in climatic suitability across the modeled extent over the study period. Green indicates increasing suitability; red indicates decreasing suitability. The circle marks the suitability-weighted centroid in the first temporal bin; the diamond marks its position in the last temporal bin. The black outline delineates the USGS GAP range boundary. The table reports centroid displacement distance, bearing, and velocity over the study period, with Bayesian regression statistics for the longitudinal and latitudinal centroid trajectories across temporal bins.
