

CLIMATIC SUITABILITY TRENDS. The left panel shows the per-cell Theil-Sen trend in climatic suitability across the modeled extent over the study period. Green indicates increasing suitability; red indicates decreasing suitability. The right panel shows the change trend, the Theil-Sen trend in successive changes in suitability over the same period. Green indicates that successive changes grew more positive, as gains strengthened or losses eased; red indicates that they grew more negative, as gains faded or losses steepened. The black outline delineates the USGS GAP range boundary for the species.
